SUMMARY

Computer engineering graduate from FERIT Osijek (2026), focused on backend and full stack web development. For my bachelor's thesis I built a real-time multiplayer quiz on my own (NestJS, PostgreSQL, React, Next.js, Docker), and in a team project I built most of a Django application. I write object-oriented code in TypeScript, Python and Kotlin, and I am ready to learn new technologies quickly with a mentor. Looking for a junior backend or full stack role in Osijek or remotely.

EXPERIENCE

Internship, GROW d.o.o., Novska, Croatia — July – August 2026

- Worked on a Flutter web application: implemented user login and API integration and added new features, partly on my own and partly as part of a team.

PROJECTS

Online multiplayer trivia quiz, bachelor's thesis — 2026
online-trivia-quiz.vercel.app · github.com/dmarenic/online-trivia-quiz

- Built a real-time quiz web app on my own: private rooms for several players, chat, scoring by accuracy and speed, a live leaderboard and an admin panel that generates questions via the Google Gemini API.
- Built the NestJS (TypeScript) backend from modules, controllers and services with dependency injection: a REST API for login, profiles, friends and a daily challenge, Socket.IO for game flow and PostgreSQL via Prisma.
- Secured authentication with JWT (Passport) and bcrypt, added role checks, request validation and rate limiting; scores are calculated only on the server.
- Built the frontend in React and Next.js (Tailwind CSS). Set up Docker Compose and GitHub Actions (lint, type check, build, Jest tests) and deployed the app on Vercel (frontend) and Render (backend).

RateMyMeal, social network for posting and rating dishes — 2026
Team project (2 members), Software Engineering course · github.com/dmarenic/ratemymeal

- Built most of the application, both backend and frontend, in Django (SQLite, Bootstrap): four roles with different permissions, dish posts with photos and ratings, comments, following, content reporting and an admin dashboard.

Blue Pulse, Android app for GNK Dinamo Zagreb fans — 2026
Mobile Application Development course · github.com/dmarenic/blue-pulse

- Native Android app in Kotlin and Jetpack Compose (MVVM, Retrofit, Room, Firebase): matches, players, player-of-the-month voting and a fan gallery.

EDUCATION

Bridging programme for admission to a university master's study — planned

Professional bachelor's study in Computer Engineering, FERIT Osijek — 2023 – 2026
Professional Bachelor of Computer Engineering (bacc. ing. comp.)
Selected courses: Web Programming, Databases, Software Engineering, Applied Machine Learning

Technical School Kutina, computer technician — 2019 – 2023

SKILLS

Programming languages: TypeScript, JavaScript, Python, C (good); Kotlin (basic)
Backend: NestJS, Node.js, Django (good); REST APIs, Socket.IO, JWT authentication
Frontend: React, Next.js, HTML, CSS (good); Tailwind CSS, Bootstrap
Databases: SQL, PostgreSQL, Prisma (good); SQLite
Mobile development: Android (Jetpack Compose, Retrofit, Room, Firebase), Flutter
Tools, testing and CI: Git, GitHub (good); Docker, Docker Compose(basic)
Concepts: object-oriented programming, MVC, MVVM, dependency injection, third-party API integration
Other: category B driving licence

LANGUAGES

Croatian, English
